

This school year, we keep on improving our English level at Luis Solana School as a Bilingual Section. The Teachers team is made up of nine teachers and a conversation assistant. Working in this sense there is an English teacher in each school level. Each teacher sometimes works with half of the class which is always better for our children to learn.

Moreover, the linguistic adviser takes half of each class once a week to practice conversation with them in order to improve their oral skills in English. Also, Mitzi, our new conversation assistant, from Texas, USA, enters every class and helps all of us with native pronunciation. We hope our pupils take advantage of these human resources.

DROCKULA PLAY

It is well known that on the 31st of October we celebrate Halloween. One of the special activities we decided to organize for this celebration was a trip to Madrid. All students from 1st to 3rd cycle watched a terrifying play called 'Drockula' in the 'Alcalá Theatre'.

The play was based on the traditional Dracula story adapted for children with many jokes and using rock music as a new component in this play, making it more attractive to children.

Once again, this project has been worthwhile. The students have realized that they can have fun learning and practicing the English language they have acquired beyond the daily school activities.

Last October we celebrated Halloween at school. From the smallest to the oldest, we enjoyed the party.

Most of the children dressed up in terrifying costumes.

They visited the "House of horror" where Infant Education students had to look for their costumes. Also, the Primary Education students looked for clues that helped them to solve several mysteries. All of them were given the typical sweets and candies.

At the end of the day, the older pupils danced to Michael Jackson's "Thriller" while the rest of the school enjoyed the performance.

A NEW SCIENCE ACTIVITY BOOK FOR US.

Pupils in 3rd grade have a new Science Activity Book. This is a wonderful thing. Why? Because it has been made by the English Teachers Team and edited by "Luis Solana" school. We think it is important to know the learning needs of our children because each one has his or her own characteristics, environments, etc.

This Science... researches and works 12 units. It has got different activities: experiments, drawing, completing boards, crosswords, games, etc.

We hope you enjoy this NEW SCIENCE BOOK!

All the students at school prepare different works which we display everywhere. Here we have some examples of first grade ones. Children in the first grade made a picture of a life-size human body. During unit one of science, each child colored the parts of the body individually and worked on the big picture in groups. Also, during science, groups of children made pictures about healthy habits. Each pupil drew one habit, thereby learning the difference between healthy and unhealthy habits.
